Welcome to the PatchMon blog! We're excited to share tips, tutorials, and product updates with the community.

What to Expect

Here you'll find:

Product updates: New features, releases, and roadmap previews

Tutorials: Step-by-step guides for common tasks

Best practices: Security, compliance, and operational tips

Community highlights: User stories and contributions

Getting Started

If you're new to PatchMon, pick the path that fits. [PatchMon Cloud](https://patchmon.net/pricing) (<https://patchmon.net/pricing>) is the managed option (14-day trial on real hosts, you only pay for the hosts that actually check in, cancel before day 14 with no charge). The [Community Edition](https://patchmon.net/open-source) (<https://patchmon.net/open-source>) is AGPLv3 and free to self-host if you'd rather run the whole thing yourself. The [documentation](https://docs.patchmon.net) (<https://docs.patchmon.net>) covers both.

Stay tuned for more posts!

The open source Linux patch management platform

PatchMon gives sysadmins one dashboard for patching across Linux, FreeBSD, and Windows fleets. Run it as a managed SaaS on PatchMon Cloud (per-host billing, 14-day trial, no fleet minimum) or self-host the AGPLv3 Community Edition on your own infrastructure.

[Start a trial: patchmon.net/pricing](https://patchmon.net/pricing)
